30th Sept 1997

Pune, India

Objective

Frontend Developer with 5+ years of experience building scalable enterprise web applications using Angular and TypeScript. Strong expertise in micro-frontend architecture, responsive UI development, and UX design with Figma. Proven experience integrating AI-driven enhancements, including smart filtering, automation tools, and GenAI-assisted development workflows to improve performance and developer productivity.

Education

Savitribai Phule Pune University

Bachelor of Mechanical Engineering

Jun 2017 – Aug 2020

Pune, Maharashtra

Technical Expertise

- **Frontend Frameworks:** Angular (13-19), Micro-Frontend Architecture, RESTful API, NgRx.
- **Languages:** TypeScript, JavaScript, HTML5, CSS.
- **UI Libraries:** Material UI, Bootstrap, SiMPL (Siemens Internal UI Library).
- **Testing & Design Tools:** Jest, Jasmine, Karma | Figma, Canva.
- **Development Tools & Methodologies:** VS Code, Postman, Browser DevTools, Git CLI Agile, Scrum

Experience

SIEMENS TECHNOLOGY PRIVATE SERVICES PVT LTD

IT Software Developer & UX Designer

Mar 2023 – Present

- Developed scalable Angular (v13-17) applications, improving performance by ~25% through modular architecture and optimization.
- Implemented Nx-based micro-frontend architecture, reducing deployment dependency issues by ~40%
- Designed intuitive UI/UX using Figma, improving user engagement and usability consistency
- Built reusable components using SiMPL design system, reducing UI development effort by ~30%
- Leveraged GenAI for code generation, documentation, and PR workflows, reducing development time by ~20%
- Improved application responsiveness and accessibility compliance across browsers
- Collaborated in Agile teams, contributing to faster sprint delivery and improved code quality
- Developed **GenAI-powered tools** to enhance engineering productivity:
 - Smart Feature Orchestrator (multi-agent workflow) → reduced feature analysis time by ~35%
 - PR Review Assistant → improved review efficiency and reduced manual effort by ~40%
 - Test Migrator (Jasmine → Jest) → accelerated migration by ~50%
 - VS Code Extension for GitHub Copilot tracking → improved AI usage visibility and optimization

Software Engineer (via Randstad India)

Jan 2022 - Jan 2023

- Developed and enhanced features for MXPower Monitor applications.
- Improved UI responsiveness and cross-browser compatibility.
- Built dynamic dashboards for monitoring electrical parameters (voltage, current, energy).
- Applied **data-driven UI enhancements** for better visualization of real-time metrics.
- Participated in Scrum ceremonies including sprint planning, stand-ups, and backlog grooming.

Software Engineer (via Valuesoft info services)

Jan 2021 - Jan 2022

- Developed responsive UI components and landing pages using HTML, CSS, and JavaScript.
- Assisted in feature enhancements and production releases in Agile environments.
- Optimized frontend performance and improved page load efficiency.

Projects

Electrification-X

- Developed a platform to monitor and control EV charging station loads using graphical and single-line diagrams.
- Implemented micro-frontend architecture using Nx for modular feature management.
- Built UI components using Siemens SiMPL library.
- Integrated **intelligent filtering and visualization techniques** to enhance user decision-making.

NX Power Monitor

- Developed applications for monitoring substations, switchgear, feeders, transformers, and motors.
- Implemented real-time monitoring for temperature, energy, voltage, and current.
- Enhanced UI dashboards with **data-driven insights and optimized rendering techniques**.

PHED – Water SCADA

- Built a web application to monitor water supply systems across Bihar.
- Displayed metrics like water pressure, supply quantity, quality, and station status.
- Improved user experience with **interactive dashboards and smart data presentation techniques**.

AI Products & Innovations

- Developed **AI-powered Hiring Optimization Platform**:
 - Enabled bulk resume screening (100+ resumes at once)
 - Implemented AI-based candidate scoring against job descriptions
 - Reduced screening time by ~60% and improved shortlist accuracy
- Built **AI-assisted Job Description Generator**, reducing JD creation time by ~50%
- Implemented **AI-based interview scheduling system**, automating panel coordination and reducing scheduling effort by ~70%
- AI-assisted UI/UX improvements using design insights.
- Smart feature orchestrator (Custom Multi-Agent Tool)
- JasmineToJest Migrator (Custom MCPO server)
- Prompt-based development workflows (GenAI-assisted coding & documentation)
